

MORE THAN JUST COSMETICS

THE BEAUTY ANGEL COSMETICS RANGE WAS DEVELOPED ESPECIALLY TO COMPLEMENT LIGHT TREATMENT.

COSMETIC FOR COLLAGEN PRODUCTION

Top quality cosmetics achieve impressively successful results. In conjunction with light the effect of skincare products can be outstanding.

ACTIVATE – COLLAGEN BOOSTER: Activates cell regeneration during the therapy

CULTIVATE – COLLAGEN INTENSIFIER: Preserves and intensifies the results

Both creams incorporate the very latest findings from cosmetic research and produce both a visible immediate effect and an intensive long-term effect. The recipes contain particularly high concentrations of active ingredients that can visibly, and above all permanently, improve the complexion. The top quality ingredients are particularly effective in conjunction with light treatment. As such, the products should be used before and after each treatment. The results can be further improved through daily application.

ACTIVATE - ACTIVATES AND SUPPORTS

Prior to each light treatment, preparation, especially of the face and décolleté, is very important to enable the light rays to penetrate the skin better. The rich ACTIVATE cream has special ingredients that softens the old cells in the corneal layer of the epidermis, thus making the skin more permeable to the light rays. This ensures that the light can penetrate the skin and is not reflected by particles of dirt or oil. In addition, highly effective substances help to activate the skin's own natural collagen production and to firm up connective tissue. ACTIVATE does not contain any perfume and is anti-allergenic to prevent any possible reciprocal effects. This skincare product can also be used daily to produce the best possible results. Since it is fragrance-free, it is excellently suited for application in the morning - and can also be used in combination with other cosmetic products.

CULTIVATE - INTENSIFIES AND PRESERVES

Following light treatment, the highly effective ingredients in the CULTIVATE cream ensure that the skin is adequately supplied with moisturising and caring nutrients. The high-tech skincare product produces both an immediate and a long-term effect and was developed to make the skin and facial contours look visibly firmer and more clearly defined. CULTIVATE supports the skin's ability to regenerate cells and, in doing so, intensifies the results of the light treatment. Wrinkles are reduced, the skin looks firmer, and the complexion looks even and radiant. At the same time, the anti-oxidants in the recipe protect against free radicals and harmful environmental influences. CULTIVATE allows you to continue benefiting from the light treatment, even at home, and supports the daily skincare routine. The subtle peach fragrance enhances the refreshing skincare ritual.

THE RIGHT USAGE - THE RIGHT USAGE - THE RIGHT USAGE - THE RIGHT USAGE - THE RIGHT USAGE

All traces of cosmetics and make-up should first be removed from the skin (e.g. with cleansing milk or make-up removing tissues). ACTIVATE can then be applied to prepare the skin perfectly for the photo rejuvenation. Following the light treatment, CULTIVATE is applied to intensify the results. Cosmetics or make-up can then be applied as usual. We recommend using ACTIVATE and CULTIVATE sparingly on the face and décolleté. Both creams can, of course, also be used on the entire body. Large bottles containing 500 ml each are available for professional studio use; the contents can be easily poured into recyclable 5 ml pots for each customer. The use of both skincare products should form an integral part of each BEAUTY ANGEL treatment.

We recommend the daily use of the products since the process of collagen, elastin and hyaluronic acid formation continues on days without treatment. These skincare products enable the benefits of the light treatment to be continued at home. They enhance the effectiveness of your daily skincare routine. Practical 200 ml bottles are available for daily use. Depending on how the products are used, this quantity is sufficient for about two to three months.

200 ML	1010191-00
500 ML	1010193-00
5 ML JAR	1010229-00

ACTIVATE – COLLAGEN BOOSTER

ACTIVATE is anti-allergenic and fragrance free and prepares the skin with a mild peeling for the light treatment.

INGREDIENTS

SEPIlift

Has a triple action for an in-depth and powerful activity against aging of the skin, together with the added Hydroxyproline, an active protection of the intercellular substance.

MATRIXYL™

Stimulates the deeper skin layers, more specifically the peptide collagen production and stimulation of fibroblasts, and assists in accelerating an intensive skin healing. Compared to Retinol, for example, it works many times faster and better. Wrinkles and fine lines are softened and reduced up to 68% within a period of 2 to 6 months. Clinical studies with Matrixyl™ show amazing results.

VITAMIN E

An important vitamin for the skin, improves the cellular breathing and cell regeneration. Vitamin E protects the skin against harmful environmental influences, thus assisting in the prevention of a premature degeneration of the skin.

GLYCOLIC ACID

This fruit acid is the leader in the concept of alpha hydroxy acids and has the strongest action. In a small concentration, as in this product, it shows a collagen enhancing action. By using glycolic acids, the skin cells are stimulated to produce new cells, which leads to a strengthening of the skin when used consistently.

200 ML	1010192-00
500 ML	1010194-00
5 ML JAR	1010230-00

CULTIVATE – COLLAGEN INTENSIFIER

CULTIVATE is a rich daily cream, which perfectly fulfils the skin needs after the light treatment.

INGREDIENTS

MYOXINOL E

This botox-like and natural active substance is extracted from the okra plant. As long as skin elasticity and muscle activity are still present, the forming process for wrinkles can be treated. If, however, one of these is absent, other remedies must be used.

ANTILEUKINE 6

Extracted from brown algae, provides a unique DNA protection against the sun and stress reactions and has an anti-inflammatory action. Strong resemblance with the skin.

ALLANTOIN

Extracted from plant tissue by breaking down certain protein analysing products (mainly in wheat seeds, horse chestnuts and comfrey). Skin rejuvenating, calming, softening and anti-scaling, stimulates the cell function.

BISALOBOL

Isolated from the camomile plant, but with less side effects than Azuleen. Disinfectant, anti-inflammatory, calming and protective.

LIQUORICE EXTRACT

This 100% safe ingredient has a powerful, lifting action on the enzymes that are present in the skin. In this way, (acquired) pigment or build up of waste material can efficiently be broken down.

VITAMIN C

Modern science succeeded to isolate vitamin C and to dissolve it in oil, which on the one hand enables vitamin C to act as an antioxidant on free radicals (affecting the healthy cells) and on the other hand to perform a resistance enhancing and collagen stimulating function.
